# Source-Insight-4.0-Share

source in sight 4 分享介绍 官网

### 1.概述

最新版 Source Insight 4.0.0095[2018/8/21官网更新目前来看是最新版],参考安装截图如下:

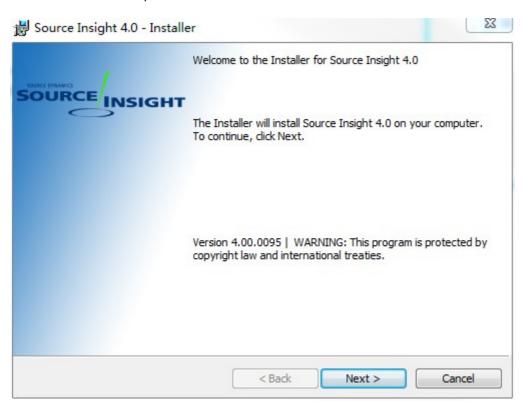

## 2.正文

### 2.1安装介绍

打开 文件夹 02\_source,里面有3个文件,分别说明如下

文件	描述	备注 
si4.pediy.lic	source in sight 授权文件	这个重要,破解需要此licence
sourceinsight4.exe	破解软件启动文件	N/A

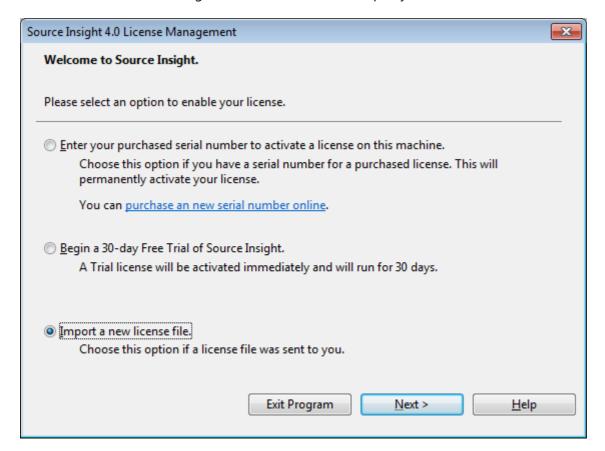

• 1首先安装setup软件

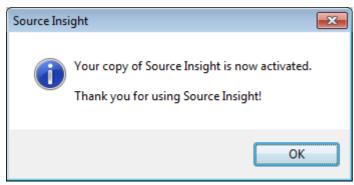

- 一路next,需要同意点下同意,选择默认安装地址[C:\Program Files (x86)\Source Insight 4.0],如果有需求可以更改下,然后点finish完成
  - 2 寻找安装目录替换 sourceinsight4.exe

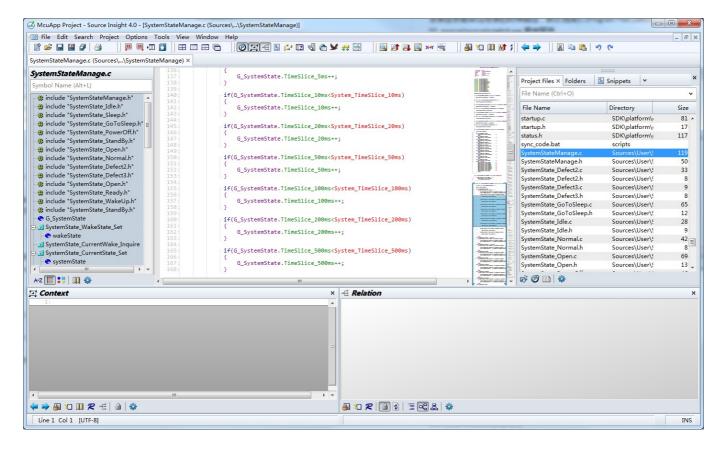

安装目录是setup安装的时候路径,默认选择[C:\Program Files (x86)\Source Insight 4.0],然后将02\_source/sourceinsight4.exe 直接替换

• 3 然后打开SOurceInSight4图标后导入授权文件 si4.pediy.lic

此时已经完成安装已经完成

## 2.2原生特性介绍

#### 2.2.1 界面改版

1. Collapsible Code Blocks 折叠代码

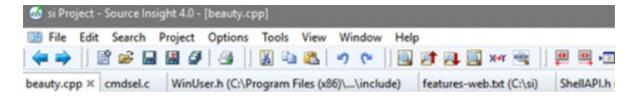

# Collapsible Code Blocks

Nested code blocks and regions can be collapsed and expanded to help you navigate and understand complex functions.

2.Multiple Visual Themes 多虚拟主题

• 3.原生多标签,不需要第三方插件

• 4.Overview\_Scroller 代码缩略图[可以关掉]

界面的改变,总之比较source in sight 3.5不管界面上还是编辑流畅度上还是更好一点。更多界面的变化 参考官网

### 2.2.2 功能增加

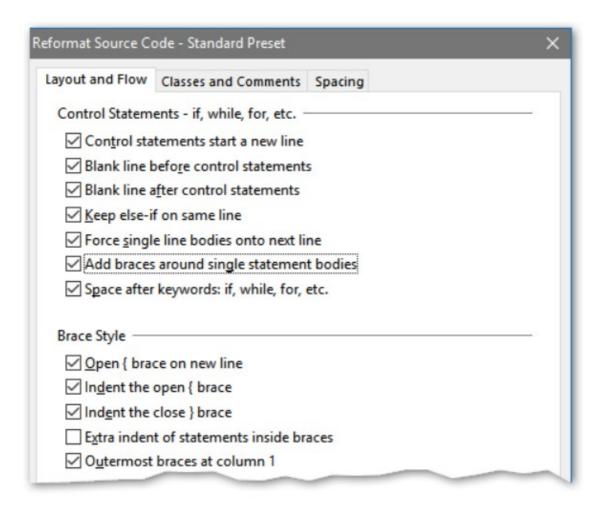

• 1.Automatic Reference Highlighting 自动引用高亮显示

# Automatic Reference Highlighting

Source Insight can highlight references to the symbol at the cursor position. For example, you can click in a variable name, and all references to the variable will be highlighted. The references are context sensitive, so a symbol in a different scope will not get highlighted. This works for variables, class members, functions, and so on. This is an option that is controlled by file type.

• 2.Code Beautifier 代码美化 ,这个功能可以用Astyle代替

# Code Beautifier

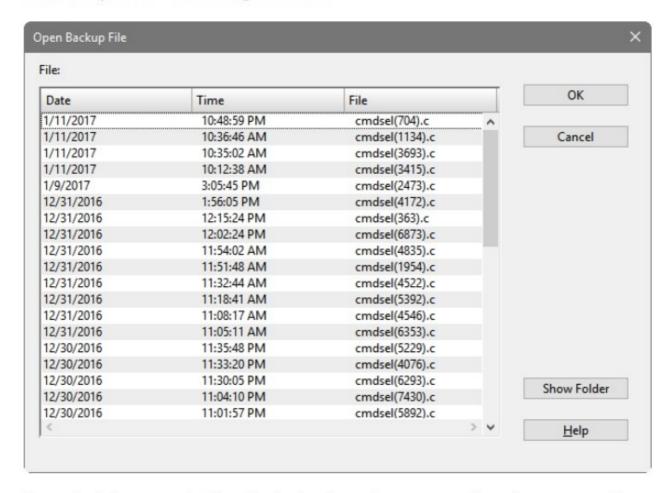

Reformat your source with the built-in code beautifier that works on curly brace languages, such as C/C++ and C#, and Java.

#### Read More

可以使用 Astyle 格式化代码,加入到 command 中,再映射快捷键

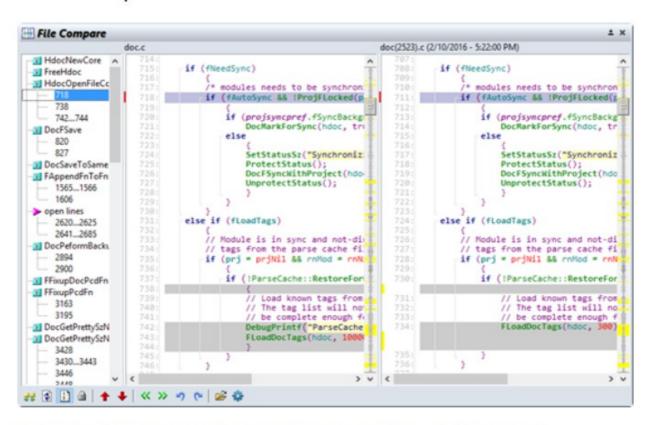

• 3.Backup File Management 文件修改备份管理,可以比较历史纪录

# Backup File Management

Source Insight automatically maintains backups of your source files when you save. It's easy to open a backup version, or compare a backup version with the current version. You control how long backups are kept.

# File Compare

Source Insight's built-in File Compare window is updated as you edit. It shows differences in two files side by side. You can quickly compare a file with an older version, using **Compare with Backup File**.

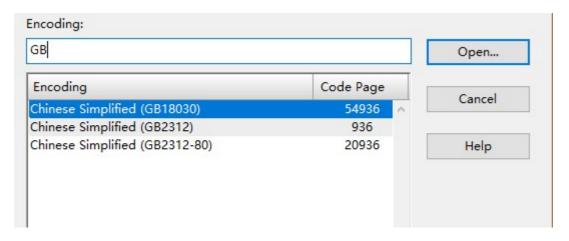

#### Read More

• 4.和SourceInSight3.5配置兼容,可以在4.0用3.5配置

可以直接将 3.5中文档目录中base项目中的cf3 导入到 4.0中

• 5.支持更多的编码格式

之前 SourceInSight3.5 默认是ANSI(GBK)编码格式,在 source in sight 4.0中打开会注释有乱码(source in sight 4.0默认是UTF-8格式),可以选择编码格式为GBK,关于编码格式,个人倾向于注释全用英文比较号,就不会又中文乱码问题

## 3.其它说明

- 3.1插件推荐
- -1 Switch\_cpp\_hpp.em

在 \*\*03\_plug\_in\Switch\_cpp\_hpp.em \*\*中加入此插件,方法与 source in sight3.5一致,此插件功能可以迅速切换同名.c和.h文件非常方便切换

-2 doxygen.em

这个插件之前分享了下,主要是生成doxygen格式的编码规范

其中插件放在的位置 在**个人文档的 Source Insight 4.0\Projects\Base** 放置。当然还有其它比较好的插件,不一一介绍了,在我这边看来source in sight 4.0 已经更新了很好,之前一些诸如中文字符删除问题已经解决,标签插件原生的就很好,不需要其它类似插件。

### 3.2.gitignore 忽略4.0产生文件

由于 source in sight 4.0 是 产生的文件是不需要进入版本管理的,故提交的时候需要忽略,下面命令针对 git 忽略 source in sight 4.0 后缀名

```
# ignore source in sight 4.0 file
*.sip_xab
*.sip_xad
*.sip_xc
*.sip_xf
*.sip_xm
*.sip_xr
*.sip_xsb
*.sip_xsd
*.siproj
*.bookmarks.xml
*.siproj_settings.xml
*.snippets.xml
*.siwork
*.sip_sym
*.sisc
*.SearchResults
# ignore source in sight 4.0 backup file
*(*[0-9]).c
*(*[0-9]).cpp
*(*[0-9]).h
```

## 3.参考

参考 备注

SourceInsight4.0的使用

针对SourceInsgiht4介绍的很详细

参考 备注

烤鸭的Source Insight学习笔记 针对SourceInsgiht3.5介绍,可以参考借鉴
